

chapter 37 electromagnetic induction pdf

An electric motor is an electrical machine that converts electrical energy into mechanical energy. Most electric motors operate through the interaction between the motor's magnetic field and winding currents to generate force in the form of rotation. Electric motors can be powered by direct current (DC) sources, such as from batteries, motor vehicles or rectifiers, or by alternating current (AC ...

Electrodynamics is the physics of electromagnetic radiation, and electromagnetism is the physical phenomenon associated with the theory of electrodynamics. Electric and magnetic fields obey the properties of superposition. Thus, a field due to any particular particle or time-varying electric or magnetic field contributes to the fields present in the same space due to other causes.

Note: If you are not at all familiar with basic electronics, you might find it easier to understand this chapter if you read chapter 12 first. The pulsed devices mentioned so far have had moving parts but rotating or fluctuating magnetic fields can be created without moving parts.
