Moore's law is the observation that the number of transistors in a dense integrated circuit doubles about every two years. The observation is named after Gordon Moore, the co-founder of Fairchild Semiconductor and Intel, whose 1965 paper described a doubling every year in the number of components per integrated circuit, and projected this rate of growth would continue for at least another decade.

When I started using USBasp (a great programmer for AVR's), I soon realized that the avrdude (the software for driving USBasp) is not much usable. Sometimes it irritates me a lot because of its command line interface. Also the avrdude-gui is not much helpful as it was just calling the avrdude in background. It cannot write/read the fuse bytes easily and reading the chip content was impossible.
