Definition. A matrix is a rectangular array of numbers or other mathematical objects for which operations such as addition and multiplication are defined. Most commonly, a matrix over a field  $F$  is a rectangular array of scalars each of which is a member of  $F$ . Most of this article focuses on real and complex matrices, that is,

matrices whose elements are real numbers or complex numbers ...

The origins of algebra can be traced to the ancient Babylonians, [page needed] who developed a positional number system that greatly aided them in solving their rhetorical algebraic equations. The Babylonians were not interested in exact solutions but approximations, and so they would commonly use linear interpolation to approximate intermediate values.
