Production of X-rays and Interactions of X-rays with Matter Goaz and Pharoah. Pages 11-20. Neill Serman  
Electrons traveling from the filament ( cathode) to the target (anode) convert a small percentage

### **Production of X-rays and Interactions of X-rays with Matter**

X-rays make up X-radiation, a form of electromagnetic radiation. Most X-rays have a wavelength ranging from 0.01 to 10 nanometers, corresponding to frequencies in the range 30 petahertz to 30 exahertz ( $3\text{Å}—10^{16}$  Hz to  $3\text{Å}—10^{19}$  Hz) and energies in the range 100 eV to 100 keV. X-ray wavelengths are shorter than those of UV rays and typically longer than those of gamma rays.

### **X-ray - Wikipedia**

X-ray astronomy is an observational branch of astronomy which deals with the study of X-ray observation and detection from astronomical objects. X-radiation is absorbed by the Earth's atmosphere, so instruments to detect X-rays must be taken to high altitude by balloons, sounding rockets, and satellites. X-ray astronomy is the space science related to a type of space telescope that can see ...

X-RAY FLUORESCENCE (XRF) When a primary x-ray excitation source from an x-ray tube or a radioactive source strikes a sample, the x-ray can either be absorbed by the atom or scattered through the material.

### **X-RAY FLUORESCENCE (XRF)**

Theory of Operation When heated, a pyroelectric crystal exhibits spontaneous decrease of polarization. Hence, as the temperature increases, an electric field develops across the crystal.

### **Miniature X-Ray Generator with Pyroelectric Crystal**

2 X-ray detectors X-rays were first discovered by Dr. W. Roentgen in Germany in 1895 and have currently been utilized in a wide range of fields including physics, industry, and medical diagnosis.
